

Promoting improved sanitation and hygiene

Through **USAID's WASHplus Project**, **FHI 360** is promoting **improved water, sanitation and hygiene practices** by encouraging communities to adopt **small doable actions**.

Small Doable Actions

Results

- Over 600 implementers to scale-up inclusive WASH interventions
- 3,000 community health workers trained to promote WASH practices
- Over 3 million households educated on improving WASH practices

Promoting Hand Washing in Communities

Hand washing with soap using **tippy taps** is just one of the small doable actions effectively promoted in **communities** through USAID's WASHplus program in Kenya.

Results

One third of 11,951 households in three WASHplus pilot sites in Rongo, Langata and Naivasha sub-counties have installed hand washing facilities.

APPROVED

Making drinking water safe

We promote **improved water, sanitation and hygiene practices** by encouraging communities to **adopt simple actions** to treat and safely store drinking water.

Results

Three in every four households in WASHplus pilot sites are treating drinking water.

Toilets = health, dignity, happiness

APPROVED

Through USAID's WASHplus Project, FHI 360 is promoting improved water, sanitation and hygiene practices by encouraging communities to adopt small doable actions such as **latrine construction** for **safe disposal of faeces**.

Results

- 104 villages in Naivasha sub-county have been verified by the sub-county verification team as claiming open defecation-free status
- Households adopting improved latrines at the outset
- Households in 11 villages modified toilets to improve access for the elderly, disabled, or chronically ill

Menstrual Hygiene Management

APPROVED

Improving **access to sanitary pads** for girls and women is a **feasible action** for communities. We encourage proper but affordable ways of menstrual management such as use of re-usable sanitary pads

Results

Trained Community health workers are educating girls in schools on menstrual hygiene management
